

VIZCAN AVD

VIZCAN's AVD is a breakthrough in cost-effective AudioVisual Distraction systems for Dentists and Rehabilitation Therapists.

AudioVisual Distraction takes your patients mind off their pain or anticipation of pain by distracting them within an immersive audiovisual world “*separate*” from their real environment.

With the dramatic improvement in technology and corresponding drop in pricing for components, researchers at **VIZCAN** have assembled the technology needed to produce an **Audio-Visual Distraction** system for patients who remain stationary for period of time from 10 minutes to many hours, while procedures are being carried out. The first groups that are using the **VIZCAN AVD** system includes Dentists and Rehabilitation Therapists. In the case of Rehabilitation Therapists, we especially focus on burn patients who regularly undergo range-of-motion therapy and wound abridement therapy.

Specifications

- Viewable screen size: 140 cm on 3 meter distance
- Angle of view: 32 degrees
- Power lasts for 5 hours between charge
- USB rechargeable
- Headset is ergonomically designed
- Headset weighs 59 gms.
- Adjustable fit for children to adults
- Built in stereo ear buds
- Eye shield and ear buds are washable

Compatible with most AV sources

iPod, HDDVD, Blu-Ray, portable DVD, DVD/VCR combo, game systems, Mp3/MP4
