

WALL1-4K™

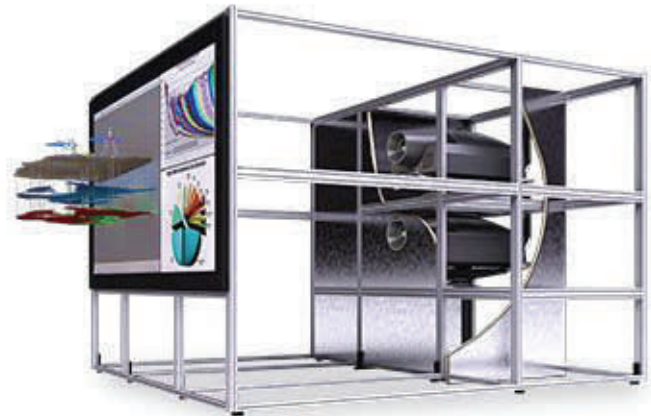

VIZCAN's WALL1-4K System is unique in the Visualization industry. Rather than a defined product with a fixed specification, WALL1-4K is a single channel product design with specifications that can be customized to ***FIT YOUR NEEDS***.

VIZCAN's WALL1-4K is versatile. It can be used as a fixed installation or as a portable Visualisation display and it is "plug and play" compatible to almost any operating system.

VIZCAN's WALL1-4K is high quality at an affordable price. All components of a WALLdesign system are selected to represent the best-of-breed technologies.

VIZCAN WALL1-4K provides unsurpassed fidelity at a very high resolution—4096 x 2160—almost 9 million pixels. A combination of graphic cards and image splitters, all provided by VIZCAN, will allow virtually any cluster computer to drive this system—in passive stereo or non-stereo mode.

One channel Wall - passive stereo

VIZCAN WALL1-4K incorporates a controller system which allows for multiple inputs (i.e. Video conferencing, spreadsheets, etc) to be exhibited and scaled on the single screen.

Specifications/Options

Projector: SONY SXRD, 5 or 10,000 lumens, resolution scalable to 4096 x 1280 pixels

Stereo: Non or Passive (via AP converter and passive filters)

Screen sizes: various depending on space and application

Screen configurations: rear or front projected

Optional control includes:

Tracking: wired or wireless

Control device: 3D mouse or wand
